

396-100010

TT-125

This fertilizer tube will apply fertilizer directly below the seed on a Case IH planter. The tube is mounted in the existing shoe, with fertilizer coming out right behind the firming point. **Please note: this is not a maintenance free tube. We recommend checking the shoe area of your planter for build-up each time you fill your planter with seed.**

TT-125 Install Instructions

Disassemble planter to be able to install fertilizer tube in center of shoe on planter.

Tube is installed using existing bolt and bolt hole in shoe as shown in the below pictures:

Run 1/4" fertilizer line down to, and through, tube as shown; leaving approximately 5/8" sticking out of the bottom, in front of the firming point.

Make sure you zip tie your fertilizer line in various areas to your planter.

This is not a maintenance free fertilizer tube. It is recommended that each time you fill your planter with seed to check these tubes for soil build-up in the shoe area.
